AB - CN1144102 NOVELTY - The preparation method of coral ginger oil is as follows: the dried coral ginger is pulverized to a certain grain size, then the broken coral ginger granules are extracted under the conditions of 7MPa-32MPa of pressure and 25-65 deg. C of temp. in the extracting tank by using supercritical carbon dioxide, then are separated under the conditions of 3MPa-6MPa of pressure and 0-55 deg. C of temp. in the separating tank so as to obtain the invented coral ginger oil. Said invented method is rapid in extracting speed, high in extracting efficiency, good in its finished oil quality, and can completely retain its medicinal activity.
